

## FORMER – Berry Pruning Machine

Even more abundant harvest with Bush Trimmer FORMER!

**How our Bush Trimmer FORMER helps to optimize growth capacity on your plantation:**

- Eliminates the most labor-intensive cultivation stage, which is the manual cutting of the falling side shoots
- Forms rows of berry bushes into V-shaped shrubs and prevents the ingrowth of shoots into the ground,
- Provides an extremely effective mechanical collection and a significant yield increase in the second year after cutting.
- Berry pruning machine FORMER is perfect for black, red and white currant crops, as well as gooseberry and saskatoon.

In case the tractor's hydraulic pump outputs superior than 35 l/min, the trimmer FORMER must be equipped with oil flow controller to regulate the frequency of cutting to reach the optimal speed 2.2 turn/second.

### Technical Specification:

Mounting method (Front)	Customized bracket based on tractor
The drive of the cutting unit	Hydraulic
Working unit diagonally adjustable	Hand-Threaded screw
Setting Position of the working unit	Hydraulic cylinder
Drive of the branch scraper	Hydraulic motor
Working Width	1 800 mm
Working Length	800 mm
Working Height	1 150 mm
Working speed	1- 3 km/h
Length of the cutting strip	1 270 mm
Output	0.2 – 0.5 ha/h
Oil requirement	18-25 l/min
Weight	110 kg
